

ANGEL REMOVAL AFTERCARE

IMPORTANT: Keep the treated area COMPLETELY DRY during the first 24 hours after the treatment.

What to avoid for the first 24 hours:

- No water
- No public swimming pools
- No sun exposure
- No steam rooms or saunas
- No facials
- No exercising
- No sweating
- No makeup on the brows
- No smoking
- No alcohol

During the first day after the treatment, clean the lymphatic drainage or fluid (this liquid will resemble water) in the treated area with dry cotton pads.

If your removal treatment happened on Wednesday, you can begin the first aftercare application on the subsequent Thursday evening.

Aftercare starting Day 2 after treatment :

In the evening prior to bed, use a mild cleanser to gently clean the area. Wash off thoroughly with water. Dry the treated area completely with a dry (lint-free) cotton pad or washcloth. Then apply ONE drop of Removal Step II or Step III Solution on each eyebrow using a cotton swab.

This aftercare should only be done only once a day, preferably at night prior to bed.

DO NOT wash the solution after application until the following morning.
